ALOK SINGH

AI Enablement Coach | Technical Trainer & Instructor | Cybersecurity Curriculum Developer

Saskatoon, SK, Canada | +1 236-863-7133 | aloklakhansingh@gmail.com | linkedin.com/in/alok-singh-75a0a817

Authorized to work in Canada | Open to remote engagements across Canada and the United States

PROFESSIONAL SUMMARY

Technical trainer, instructor and security practitioner with 9+ years of combined experience in instructor-led training, curriculum development, enterprise consulting and hands-on technical delivery. Daily professional user of ChatGPT, Claude, Microsoft Copilot and Gemini for curriculum authoring, research, analysis, scripting and workflow automation, and a hands-on builder of AI assistants and agents connected to approved documents and data sources through prompt engineering, retrieval, MCP connectors and API integration. Delivers virtual instructor-led sessions, live demonstrations and hands-on labs to adult professional audiences of mixed technical ability, and translates complex technology into practical, measurable workflow improvements. Deep specialization in responsible and secure AI adoption, including prompt injection, data poisoning, agentic risk and data-governance controls for enterprise AI deployments.

CORE COMPETENCIES

AI Enablement and Coaching: AI adoption and enablement | ChatGPT | Claude | Microsoft 365 Copilot | Google Gemini | Prompt engineering | AI assistants and agents | Agentic workflows | Retrieval-augmented generation (RAG) | Model Context Protocol (MCP) | Custom GPTs and projects | Workflow mapping and redesign | Live demonstrations | Hands-on build sessions | Use-case discovery | Responsible AI practices | AI governance and acceptable use | Change management and adoption support

Training and Facilitation: Instructor-led training (ILT) | Virtual instructor-led training (VILT) | Corporate and adult learning | Hands-on lab development | Curriculum and courseware design | Assessment and exam authoring | Competency mapping | Instructional design | Learner coaching and mentorship | Dry runs and client orientation calls | Stakeholder collaboration | Technical documentation | Public speaking and presentation

Consulting and Business Analysis: Business requirements gathering | Business process analysis | Problem solving | Solution recommendation | Metrics and impact tracking | Cross-functional collaboration | Client-facing delivery | Executive and non-technical communication

Platforms and Tools: Microsoft 365 | Microsoft Teams | SharePoint | Power Automate | Zoom | Moodle | Canvas | D2L Brightspace | Blackboard | Learning management systems (LMS) | Microsoft Azure | AWS | Python | PowerShell | Bash | Git

Cybersecurity: Penetration testing | Vulnerability assessment | Ethical hacking | Digital forensics and incident response (DFIR) | Splunk SIEM | Microsoft Sentinel | Microsoft 365 Defender | Security operations (SOC) | Threat intelligence and threat hunting | MITRE ATT&CK | OWASP Top 10 | Kali Linux | Metasploit | Burp Suite | Nessus | Wireshark | Active Directory | Identity and access management (IAM) | Zero Trust | NIST Cybersecurity Framework | ISO/IEC 27001 | GDPR | PCI-DSS | GRC

APPLIED GENERATIVE AI EXPERIENCE

- Use ChatGPT, Claude, Microsoft Copilot and Gemini daily in a professional capacity to accelerate curriculum authoring, assessment generation, technical research, threat analysis, documentation and scripting; maintain comparative working knowledge of each platform's strengths, limitations and enterprise controls.
- Design and build AI assistants and agents for real work tasks — defining scope and system instructions, connecting them to approved documents and data sources through retrieval and Model Context Protocol (MCP) connectors, integrating them with APIs and scripts, and iterating on prompts until output is reliable and repeatable.
- Map existing manual workflows to AI-enabled workflows: identify the tasks worth automating, choose the right tool for the outcome, define the prompt and data pattern, and document the redesigned process so it can be repeated by others.
- Apply responsible AI practices in every build — data minimisation, approved-source grounding, human review checkpoints, output verification, and guardrails against prompt injection, data leakage and over-permissioned agent access.
- Research and teach the security dimension of enterprise AI adoption: prompt injection, data poisoning, agentic security risk, and the attack surface created where large language models intersect with privileged access management and corporate data.

PROFESSIONAL EXPERIENCE

Cybersecurity Instructor and Program Lead, Cybersecurity Analyst Program

Willis College — Remote / Canada | Aug 2022 – Present

- Deliver live instructor-led (ILT) and virtual instructor-led (VILT) training to full-time adult cohorts, facilitating multi-hour technical sessions in Zoom and Microsoft Teams and providing real-time, hands-on support as learners apply concepts to practical work.
- Design, develop and deliver a full diploma-level curriculum, aligning course outcomes to industry competency frameworks and maintaining a structured curriculum that facilitators and learners can follow consistently across cohorts.
- Build and maintain hands-on labs and build sessions in which learners configure real tooling end to end, troubleshoot their own environments, and are coached individually through blockers.

- Use generative AI tools daily as part of the delivery workflow — drafting lab guides, generating and stress-testing assessment items, producing scenario content and accelerating technical research — and continually refine prompting patterns for quality and accuracy.
- Refresh curriculum continuously with emerging technology and threat categories, including AI-driven attacks, agentic security risk, ransomware and cloud security, so content reflects the current state of the field.
- Coach and mentor learners with widely varying levels of technical and data literacy, adapting explanations, pacing and support to the individual, and tracking progress toward employment outcomes.
- Partner with industry practitioners and stakeholders to embed real-world case studies into the program and align content with employer expectations.

Cybersecurity Instructor

Saskatchewan Polytechnic — Saskatchewan, Canada | Aug 2021 – Jun 2022

- Created and delivered lesson plans, classroom materials and practical lab exercises across core cybersecurity and information security topics for post-secondary cohorts.
- Assessed learner progress, authored examination materials, and provided individual coaching and performance feedback.

Security Analyst — Penetration Testing and Security Operations

HCL Technologies — India | Feb 2015 – Apr 2019

- Delivered enterprise penetration testing and security analysis for Tier-1 clients including FedEx and Cisco, working directly with client stakeholders to scope engagements and communicate findings.
- Delivered technical training and security best-practice sessions to internal engineering teams and client staff, translating technical findings into guidance that non-specialist audiences could act on.
- Collaborated with cross-functional engineering teams to analyse business and technical requirements and translate security findings into prioritised, practical remediation actions.
- Conducted application and network penetration testing against OWASP Top 10 vulnerability classes including CSRF, cross-site scripting, SQL injection, privilege escalation and command injection.
- Implemented and operated Splunk SIEM; developed detection logic for SQL injection, XML injection and command prompt exploitation patterns.

Software Developer

Holiday Deals Pvt Ltd — India | May 2013 – Nov 2013

- Developed ASP.NET web applications and engaged directly with customers to define project features and security requirements.

EDUCATION

Master of Administrative Science — Computer Security and Forensics Administration

Fairleigh Dickinson University, Vancouver, BC, Canada

Master of Computer Applications (MCA)

India

CERTIFICATIONS

Microsoft Certified: Security, Compliance and Identity Fundamentals (SC-900) | ISO/IEC 27001 Information Security Associate | Digital Forensics Essentials (DFE) — EC-Council | Ethical Hacking Essentials (EHE) — EC-Council | API Security Architect | Cyber Security Foundation Professional Certificate

PROFESSIONAL DEVELOPMENT AND RESEARCH

AI and agentic security research: prompt injection, data poisoning, and the attack surfaces created where large language models and autonomous agents intersect with privileged access management and enterprise data.

Applied AI development: independent projects involving AI-assisted application development, agent design and secure integration patterns.

Identity security research: credential-based attack chains, authentication bypass, and password manager and single sign-on threat models. Capture the Flag (CTF) competitor; active participant in cybersecurity conferences and open-source security research communities.
